PARROSOFT

PARROEXPLORE
USER GUIDE

What is Parroexplore?

Parroexplore is an internet browser. Parrosoft was designed not to compete with the great browsers already out there, but rather to simplify the internet browsing experience. This browser was specifically created for individuals who want a fast, user friendly alternative to other commericial browsers.What's really great about parroexplore is that it is fast, intuitive, and less resource intensive than other browsers. Parroexplore uses minimal cpu cycles, takes only a few megabytes of harddrive space, and it starts up quickly. While many may believe that cpu usage, and memory footprint of software is irrevelant in the modern age, many individuals in developing nations may be running software on hardware thats outdated. Modern web browsers today often times don't support old outdated hardware, and those individuals miss out on a decent internet experience. The objective of parroexplore is to simplify and enhance the internet experience of everyone regardless of wheter or not they have the most up to date computer or not.

System Requirements

Although Parroexplore will work with most pcs runing the Windows® operating system, the following configuration or better is recommended for enhanced user experience.

Platforms: Windows® 98/ME/NT/2000/XP/VISTA/7/8/8.1/10
Processor: Pentium® III 500MHz or higher
Memory: 128MB RAM or higher
Hard Disk: 50GB or more
